

Main Return Line Filter Package

Seatrax has incorporated a low-pressure, large main **return line filter** as a standard component on all cranes. This **filter package** is available as an after-market retrofit kit for older Seatrax cranes equipped with the smaller **dual filters** on the **return lines**.

- Replaces existing **return line filters**
- Available for both 3,000 psi fixed displacement and 6,000 psi **variable displacement hydraulic systems**
- Visual **indicator** that turns green to red as the **cartridge** becomes full
- **Internal bypass valve** that diverts the flow when the filter **cartridge** is full
- **Drain port** lets you drain the housing before changing the **cartridge**
- **Air bleed port** removes the trapped air after the **cartridge** has been replaced
- **Filter cartridge** replacement is easy and quick
- Installation is simple and requires only **common hand tools**
- A **custom hose package** is provided for each individual application

Technical Data

- 500 psig operating pressure
- Bypass valve
- Visual contamination indicator
- Design safety factor 3:1
- 150 psid cartridge collapse rating
- Vertical mount
- Easy filter replacement
