

Remote-Operated Emergency Power System

Seatrax, a crane manufacturer known for its superior products, has developed an **emergency power system** that easily solves problems caused in the event of a **prime mover** failure.

With this innovative system, crane operators can safely perform **emergency load lowering**, **emergency boom lowering** or **emergency slewing** with only the push of a button. Some of the features of Seatrax's system include:

- No power required from the **prime mover**
- Electronic system that is automatically connected to all functions of the crane without the need of connecting additional equipment
- Utilizes a **remote control** for operations that can be operated from any of the walkway areas of the crane
- Uses a **selector switch** on the control that allows the operator to perform one function at a time
- System is available for Safe Area or Class I, Division 2 classified areas
- System is contained in a small package and can be fitted into any Seatrax crane
