

Seatrax High-Pressure Filtration Package

Seatrax has developed a high-pressure filter package available for cranes equipped with variable or fixed displacement hydraulic systems.

- Compatible with the existing hydraulic filtration system.
- Provides a separate filter for the main/auxiliary, boom and slew pumps.
- Installation requires only common hand tools.
- In the event of hydraulic pump failure, the filters will collect and remove contaminants before they enter the system.
- When a filter cartridge is at full capacity, a visual indicator activates and the flow is diverted through a bypass valve.
- Visual indicator with manual reset.
- Thermal lockout device is located in the indicator eliminating false readings when the hydraulic oil is below 70° F.

Technical Data

- . 6,090 psig operating pressure
- . 18,840 minimum burst pressure
- . 10 micron filter media rating
- . Visual contamination indicator with thermal lockout device
- . Bypass valve
- . Code 62 SAE connection flange
- . Vertical Mount
- . Easy filter cartridge replacement
